Summary

Applied data scientist with 5+ years in pharmaceutical distribution and e-commerce. Turns operational decisions (routing, replenishment, campaign allocation) into optimisation, bandit and reinforcement learning problems, decides how success is measured before building, and ships end to end. Acting lead of a 6-person data team at Kalbe Farma. Monash Master of Data Science (multi-agent RL thesis); published bandit research.

Experience

Kalbe Farma, Jakarta

Indonesia's largest publicly listed pharmaceutical and healthcare group

Data Science Senior Supervisor (acting Data Science Lead) | Jun 2025 – Present

- Lead a 6-person data team (3 full-time + 3 interns) while the manager role is vacant: run two-week sprints, set priorities with business users, final review of analyses.
- Built a dispatch planner for a radiopharmaceutical that halves in under two hours: OR-Tools routing swept over departure and fleet size, doses back-solved. In client testing.
- Built a branch replenishment planner for a drug distributor: stock targets, fair allocation of scarce stock, OR-Tools truck routing, every figure explained. In client testing.
- Rebuilt a loyalty-app recommender (recency-weighted item-item, new-member fallback). Offline hit rate@6 18–64% above recent popularity. Live.
- Designing a platform that turns a YAML table description into an LLM data agent; code writes the SQL, access is enforced outside the model, go-live gated on an answer key. In development.
- Ship full-stack tools (Python, React, Docker, GitLab CI) with AI coding agents, under code review and tests.

Data Scientist | Aug 2023 – May 2025

- Built a discounted Thompson-sampling allocator that moved campaign sends toward variants beating control. Ran in production until replaced by fixed rules in 2026.
- Clustered warehouse picking orders on layout-aware walking distance; picking time fell an estimated 10–20% in a one-branch trial.
- Designed a forecasting model for B2B sales.
- Built a daily news-monitoring system with LLM summaries. Live.

- Coached data scientists across subsidiaries in Python, GitLab and data science practice.

Blibli.com, Jakarta

Major Indonesian e-commerce platform

Associate Data Scientist, Technology | Jan 2023 – Jul 2023

- Developed a product-grouping algorithm for the product catalogue and forecasted daily sales for warehouse products.

Junior Data Analytics, Advanced Analytics | Mar 2021 – Dec 2022

- Built an object-detection model to identify similar products, reducing manual review time by 30%.
- Built and maintained Seller Growth dashboards and product crawlers for competitor research.

Education

Master of Data Science, Monash University (Indonesia campus) | Conferral Nov 2026 WAM 79.875 (Distinction average). Completed part-time while working full-time. Thesis: *Multi-agent reinforcement learning for traffic signal control on motorcycle-dominated corridors*. Code: github.com/faathirchikal/marl-tsc-jakarta-corridor

- Benchmarked nine signal controllers on a 12-junction SUMO model of a Jakarta corridor; multi-agent RL cut simulated queues 43.5% vs the best classical baseline (10 seeds).

Bachelor of Science in Mathematics, Universitas Indonesia | 2016 – 2020 GPA 3.86. Thesis: *Piecewise-Stationary Multi-Armed Bandit with Bernoulli Arms*. Assistant Lecturer in Real Analysis, Probability Theory, Survival Analysis and Mathematical Statistics.

Publications

F. C. Asyuraa, S. Abdullah, T. E. Sutanto. *Empirical evaluation on discounted Thompson sampling for multi-armed bandit problem with piecewise-stationary Bernoulli arms.* Journal of Physics: Conference Series 1722, 012096 (2021). doi:10.1088/1742-6596/1722/1/012096

Skills

- **Optimisation & decision science:** vehicle routing (OR-Tools), allocation and inventory policy, multi-armed bandits (Thompson sampling), experimentation and control groups
- **Reinforcement learning & simulation:** multi-agent RL (PPO), SUMO traffic simulation, equivalence testing and bootstrap intervals
- **Machine learning & LLMs:** forecasting, recommenders, NLP, object detection, LLM agents over SQL with answer-key evaluation
- **Engineering:** Python, SQL, React, Docker, GitLab CI/CD, BigQuery, Google Cloud Platform, SLURM HPC
- **Languages:** Indonesian (native), English (professional; English-medium Master’s)
