Faathir Chikal Asyuraa

Applied Data Scientist (acting Data Science Lead) | Optimisation, Bandits & Reinforcement Learning

Jakarta, Indonesia (UTC+7) · Open to remote and relocation, flexible for US/EU overlap · faathir98@gmail.com· linkedin.com/in/faathir-chikal-asyuraa-608bb7180 · github.com/faathirchikal · faathirchikal.github.io

Summary

Applied data scientist and acting data science lead at Kalbe Farma, with 5+ years in healthcare distribution and e-commerce. I build optimisation and machine learning tools for teams across the business, from the model to the app people use, and set the success measure before building. Monash Master of Data Science (multi-agent RL thesis); published bandit research.

Experience

Kalbe Farma, Jakarta

Indonesia's largest publicly listed pharmaceutical and healthcare group

Data Science Senior Supervisor | Jul 2025 – Present

Acting Data Science Lead since Nov 2025 (manager role vacant)

- Lead a 6-person data team (3 full-time + 3 interns): run sprints, set priorities with business users, review analyses, coach data scientists across group companies.
- Built a dispatch planner for a radiopharmaceutical whose activity halves in under two hours: OR-Tools routing swept over departure time and fleet size, doses back-solved. In acceptance testing.
- Built a branch replenishment planner for a national distribution company: stock targets, fair allocation of scarce stock, OR-Tools truck routing, every figure explained. In acceptance testing.
- Rebuilt a loyalty-app recommender (recency-weighted item-item, new-member fallback). Offline hit rate@6 18–64% above recent popularity. Live.
- Building a platform that turns a YAML table description into a governed LLM data agent: code writes the SQL and enforces access, go-live gated on an answer key. In development.
- Also led or built: shelf-share detection and OCR, call transcription, facility siting (p-median MILP), discount anomaly alerts, image fraud scoring.
- Build the planners as multi-user web apps (FastAPI, PostgreSQL, Docker, GitLab CI) with AI coding agents, under code review and tests.

Data Scientist | Aug 2023 – Jun 2025

- Built a discounted Thompson-sampling allocator that shifted campaign sends toward variants beating control. In production until replaced by fixed rules in 2026.
- Clustered warehouse picking orders on layout-aware walking distance; picking time fell an estimated 10–20% in a one-branch trial. Retired 2025.
- Built B2B sales forecasting and a live daily news monitor with LLM summaries.

Blibli.com, Jakarta

Associate Data Scientist, Technology | Jan 2023 – Jul 2023

- Developed a product-grouping algorithm for the product catalogue and forecasted daily sales for warehouse products.

Junior Data Analytics Officer, Advanced Analytics | Mar 2021 – Dec 2022

- Ran sales reporting, forecasting and ad hoc analysis. Built an object-detection model for similar products that cut manual review time by 30%.

Education

Master of Data Science, Monash University (Indonesia campus) | Conferral Nov 2026 WAM 79.875 (Distinction average), studied part-time while working full-time. Thesis: *Multi-agent reinforcement learning for traffic signal control on motorcycle-dominated corridors*

- Benchmarked nine signal controllers on a 12-junction SUMO model of a Jakarta corridor; multi-agent RL cut simulated queues 43.5% vs the best classical baseline (10 seeds).

Bachelor of Science in Mathematics, Universitas Indonesia | 2016 – 2020 GPA 3.86. Thesis on piecewise-stationary multi-armed bandits (published, below). Assistant Lecturer in probability and statistics.

Publications

F. C. Asyuraa, S. Abdullah, T. E. Sutanto. *Empirical evaluation on discounted Thompson sampling for multi-armed bandit problem with piecewise-stationary Bernoulli arms.* Journal of Physics: Conference Series 1722, 012096 (2021). doi:10.1088/1742-6596/1722/1/012096

Skills

- **Optimisation:** vehicle routing, facility location analysis, inventory replenishment, mixed-integer linear programming (MILP), OR-Tools
- **Reinforcement learning & experimentation:** multi-agent RL, multi-armed bandits, A/B testing, causal inference
- **Machine learning:** time-series forecasting, recommender systems, NLP, anomaly detection, computer vision (object detection, OCR), speech-to-text, PyTorch
- **LLMs:** LLM agents (tool calling, text-to-SQL), LangGraph, RAG, LLM evaluation, Cube semantic layer, OpenAI API
- **Engineering & data:** Python, SQL, FastAPI, Docker, GitLab CI/CD, BigQuery, Spark
- **Languages:** Indonesian (native), English (professional)
